NETWORK HARDWARE

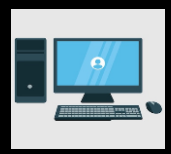

CONSISTS OF

END DEVICES

ARE USED TO

Send,Receive And Use data on Networks

include

Sends and receives

Accesses

Communicate

Prints

INTERMEDIATE DEVICES

ARE USED TO

Connect Devices , Forward Data

include

Routes

Connects

Provides

Connects

AJAY REDDY

NETWORK HARDWARE VS. NETWORK SOFTWARE

NETWORK HARDWARE

- ROUTER
- SWITCH
- MODEM
- NETWORK CABLE
- ACCESS POINT

BOTH

- Enable Network communication
- Work together to send and receive data

NETWORK SOFTWARE

- Operating System

- TCP/IP Protocols
- Device Drivers

- Firewall Software

How hardware and software interact

- Hardware run software.
- Software connects hardware

→ Hardware transmits data using software protocol → Together they establish a stable network connection

The Communication process

PROTOCOL

A set of rules that governs data communication between sender and receiver.

Ajay Reddy

Sender

The sender creates and sends data to the receiver.

Message

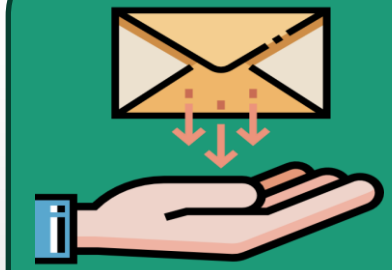

The information or data that is transmitted

Transmission mesdium

The physical path through which the data travels from sender to receiver.

Receiver

The receiver receives the data and interprets it into meaningful information.

Protocol

Ensures accurate, reliable, and orderly communication between sender and receiver.

Chain sequence:

sender → message → Transmisson medium → receiver
